the development of science consists not only of deepening and widening the already established scientific disciplines but also depends on the emergence of new ones the emergence and development of new sciences is influenced primarily by two factors isolation and generalisation isolation of scientific disciplines is due to the discovery of new objects of investigation and the emergence of specific scientific trends this leads to the study of a relatively narrow class of objects which are characterised by their specific approach to both the formulation and the solution of problems examples of this type of specific scientific disciplines include for instance chemistry of high molecular compounds and the theory of electrical machines which are both devoted to the study of a relatively narrow field in addition there are the more general scientific disciplines whose characteristics are that they are created for the purpose of studying such natural phenomena as occur in a very wide class of objects disciplines of this type are for instance the theory of dimensions and the theory of similarity the theory of dynamic systems and thermodynamics the very general as opposed to the very specific sciences tend by their nature to be more theoretical and depend much more on the language mathematical or otherwise used to describe them

more often teacher educators and the programs and institutions they represent are often confronted with an increasingly difficult responsibility of preparing teachers to address issues of diversity social justice and equity here patrick and karen jenlink bring to the foreground current work by teacher educators in universities across the u s it specifically focuses on the challenges of standards and accountability the no child left behind act licensure certification issues increasing diversity issues of social justice shifting demographics and the myriad of social issues that make schools and teaching problematic the editors incorporate portrait as a metaphor and guiding lens for examining their respective programs providing richly detailed descriptions and defining qualities of the teacher preparation programs that illuminate how teachers learn in a field based program the nine portraits presented throughout this book provide the reader an experience of seeing new ways of learning to teach set against the backdrop of a changing america the authors demonstrate an understanding of the need to set aside conventional practices for new mediums of expression and learning and constructing new and alternative pedagogies for learning importantly the authors present a narrative window into learning to teach that reflects a re imagining of teacher education as a culturally
